

Flex & Shine

Enhance[®] Flex

Finishing & Polishing System

The Enhance[®] Flex system features flexible lamellas that adapt to every dental surface structure: anterior and posterior. So you need only one shape for all your composite restorations. It's that simple.

Brilliant polishing results and intuitive application deliver additional advantages. And because it is re-processable up to 10 times, you'll also save on waste and costs.

More than
70%
of dentists say that
simplicity is the most
important criteria
a finishing and
polishing system
needs to fulfill.¹

Where simple application meets successful performance

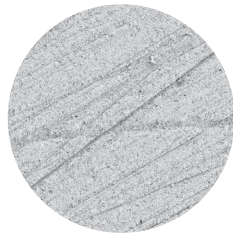

One shape for every dental surface

The special lamella geometry with rounded edges adapts to virtually any dental surface structure.

Extraordinary durability

Save time and money with a system that is re-processable up to 10 times.

Surface of Spectra ST universal composite treated with 600 grit sandpaper.

Surface of Spectra ST universal composite after finishing and polishing with Enhance® Flex.

All-around performance

Enhance® Flex is suitable for all composite materials and is designed to preserve the tooth structure.

Brilliant polishing results

Patients will enjoy enviable esthetics, while dentists will appreciate the intuitive application to get there.

For natural-looking esthetics that last, try Spectra ST* composites and Enhance® Flex.

Starting Point: Class IV restoration

Final result: Spectra ST A2 Cloud™ shade and D1 opaque dentin shade. Finished & polished with Enhance® Flex.
